ANIKET HOMDEO KOLHE

+91-7262810317 |Aniketkolhe88@gmail.com | LinkedIn – Aniket Kolhe | https://github.com/Aniket163

➢ PROFESSIONAL SUMMARY

AI Engineer with hands-on experience in Generative AI, Large Language Models (LLMs), Agentic AI, Multi-Agent Systems, RAG, Graph-RAG, and Machine Learning. Skilled in developing AI-powered applications using Python, LangChain, LangGraph, CrewAI, FastAPI, SQL, and vector databases. Experienced in building AI agents, RAG chatbots, fine-tuned LLM applications, and predictive analytics solutions. Strong foundation in deep learning, prompt engineering, MLOps, cloud AI services, and scalable AI application development. Passionate about building production-ready AI systems that solve real-world business challenges.

➢ TECHNICAL SKILLS

- **Programming**: Python, Java, C, C++
- **Generative AI**: LLMs, RAG, Graph-RAG, Agentic AI, Multi-Agent Systems, Fine-Tuning, RLHF, LoRA, PEFT
- **AI Frameworks**: LangChain, LangGraph, CrewAI, AutoGen, Hugging Face
- **Machine Learning**: Scikit-learn, PyTorch, TensorFlow, Deep Learning, Clustering, Forecasting, NLP
- **Vector Databases & Search**: Pinecone, pgvector, OpenSearch, Semantic Search, Vector Embeddings, ChromaDB
- **Backend:** FastAPI, Async Programming, REST APIs, SQL
- **Cloud & MLOps**: AWS, SageMaker, Bedrock, Databricks, MLflow, Vertex AI, Azure OpenAI, Weights & Biases
- **Data Analytics:** Pandas, NumPy, Power BI, SQL Analytics
- **Foundation Models**: OpenAI GPT-4o, Gemini, Claude, LLaMA, Mistral

➢ Work Experience

• AI Engineer | Abhiraj Enterprise Pvt. Ltd. | Nagpur | FEB 2025 – Present | Contract – Bases Job

- Develop and implement **AI/ML solutions using Python** to automate business processes, improve operational efficiency, and solve real-world business problems.
- Build **Generative AI and LLM-powered applications** using RAG, Prompt Engineering, embeddings, vector search, and machine learning techniques.
- Perform **data preprocessing, analysis, feature engineering, model development, testing, evaluation, and optimization** using Python, Pandas, NumPy, and Scikit-learn.
- Develop and integrate **REST APIs using FastAPI**, connecting AI/ML applications with databases and business systems while maintaining scalable and modular code.
- Collaborate with teams to understand **business requirements, identify AI automation opportunities, deploy and troubleshoot solutions**, and use Git/GitHub for version control and development workflows

➢ INTERNSHIPS

• AIML Intern | Rudra Analytics and Research Pvt. Ltd.| Pune

- Collected and extracted **election-related public data** from government websites and official sources using **web scraping techniques** and automated data-extraction workflows.
- Scraped and processed datasets including **Form 20, polling-station lists, constituency-level records, and other election-related documents** for downstream analysis.
- Converted unstructured and semi-structured documents into **structured Excel/CSV datasets**, ensuring data was organized and ready for analysis.
- Processed election data available in **regional languages** using **OCR (Optical Character Recognition)** and language/data conversion techniques to make the information machine-readable.
- Supported the **data preparation and AIML pipeline** for election-data analysis and predictive research by cleaning, validating, transforming, and organizing datasets.

• AI Intern | CodeSpyder Pvt. Ltd.| Pune

- Developed and tested interactive game applications as part of AI and software development assignments, focusing on gameplay functionality and user interaction.
- Implemented game features, logic, and interactive components using programming and development tools.
- Worked on daily technical assignments and development tasks, following project requirements and predefined specifications.
- Debugged, tested, and improved application functionality to identify and resolve development issues.
- Collaborated with team members and followed software development practices to complete assigned AI, programming, and application development tasks.

➢ Industrial Live Project Intern (Gen AI & Full Stack Development)

- **Coding Savvy | Remote | Jan 2026 – Feb 2026**
  - 1) Developed and integrated AI-powered features into web applications using modern development practices.
  - 2) Worked on frontend, backend, database integration, and application deployment.
  - 3) Applied Generative AI concepts to solve real-world business problems and enhance user experience.
  - 4) Collaborated in a project-driven environment while following industry-standard development practices.
  - **Technologies:** Gen AI, Full Stack Development, API Integration, Database Management, Deployment.

➢ PROJECTS

- **Agentic - AI Book Recommender, 3 Months Duration**
  - Developed an AI-powered book recommendation system using Streamlit and Groq LLM to provide personalized learning resources based on user interests.
  - Designed an Agentic AI workflow consisting of Topic Analysis, Book Recommendation, and Learning Roadmap Agents.
  - Retrieval-Augmented Generation (RAG) architecture using vector search concepts to improve recommendation relevance.
  - Built an interactive web interface allowing users to explore recommended books and structured learning paths.
  - Applied Prompt Engineering, API Integration, and LLM orchestration techniques for intelligent content generation.
  - https://github.com/Aniket163/Agentic-AI-Book-Recommender

- **AI Invoice Parser & Analytics System, 3 Months Duration**
  - Developed an **AI-powered Invoice Parser & Analytics System** using Python, FastAPI, MySQL, EasyOCR, OpenCV, and Scikit-learn, reducing manual invoice processing effort by **80%**.
  - Designed and implemented **18+ RESTful APIs** with JWT authentication for secure user management, invoice CRUD operations, OCR processing, analytics, and reporting.
  - Built an OCR-based document processing pipeline achieving **95%+ extraction accuracy** across **2,000+ invoice pages**, automatically extracting Invoice Number, Vendor Name, GST Number, Invoice Date, and Total Amount.
  - Engineered AI-based features including **Duplicate Invoice Detection, Invoice Classification, and Invoice Validation**, improving invoice verification and reducing duplicate records.
  - Optimized the **MySQL database** using indexed tables and SQLAlchemy ORM, improving query performance by **40%**, and developed Pandas-based analytics for vendor-wise spending and monthly expense analysis.
  - Containerized the application using **Docker and Docker Compose**, implemented **GitHub Actions CI/CD**, and prepared production-ready deployment for **AWS EC2, Render, and Railway**.

➢ CERTIFICATE

- **Python, Machine Learning, and Data Science**, Code Spyder Technologies Pvt. Ltd., Pune, Jun 2024 – Dec 2024
  Covered skills: Python, SQL, Data Science Libraries, Artificial Intelligence, Machine Learning, Deep Learning (ANN, CNN, RNN), Computer Vision, NLP
- **Green Skills and Artificial Intelligence** – Skills4Future Program, Shell India, Feb 2025

➢ EDUCATION

- Bachelor of Engineering (Mechanical Engineering), SKN College of Engineering, Pune | Aug 2023 – May 2026
- Diploma in Mechanical Engineering, Anjuman Polytechnic, Wardha | Jul 2020 – Jun 2023
- HSC, G.B.M.M Junior College, Hinganghat | Jul 2017 – Mar 2019
- SSC, Y.E.S. English School, Amravati | Jun 2016 – Apr 2017

➢ HOBBIES

Photography & editing video, Team Leadership & Collaboration
